

TRAN NAM DANG KHOA

FULLSTACK DEVELOPER

Address: Duong Quang Ham Street, An Nhon ward, Ho Chi Minh city
Phone: (+84) 344 117 735
Email: dangkhoa1512.work@gmail.com
GitHub: github.com/Khoa1512
Linkedin: linkedin/kelvindev1512
Portfolio: [kelvindev](https://kelvindev.com)

PROFESSIONAL SUMMARY

Fullstack Developer with hands-on experience delivering production-grade web applications end-to-end, from **Next.js/React** frontends to **ASP.NET Core/Python** backends. Built a real-time telemetry pipeline processing **10+ packets/second at sub-100ms latency** and cut feature development time by **30%** through reusable UI infrastructure. Looking to bring this end-to-end ownership and performance-driven mindset to a team building fast-growing, high-impact products.

TECHNICAL SKILLS

Frontend Core: HTML5, CSS3, JavaScript (ES6+), TypeScript, Core Web Vitals (Responsive Design).
Frameworks: ReactJS, Next.js (App Router), TailwindCSS, Radix UI / shadcn/ui
Real-time & Maps: SignalR / WebSocket, Kafka, LiveKit (WebRTC), Cesium, MapLibre GL, Turf.js
State & Data: TanStack Query, TanStack Table, React Hook Form, Zod, SWR, RESTful API
Mobile & Backend: React Native, Flutter (basic), ASP.NET Core (.NET, C#) (familiar), Next.js API Routes, Python (FastAPI), JWT/ OAuth2
Database & Infra: SQL Server, PostgreSQL, MongoDB, Redis, Docker (basic)
Testing & DevOps: Vitest (familiar), CI/CD (GitHub Actions/GitLab CI)
Tools & Process: Git, GitLab, GitHub, Agile/Scrum, AI-assisted development workflow

WORK EXPERIENCE

Fullstack Developer — Rustech JSC (UAV / Robotics)

Nov 2025 – Present

*As one of 4 engineers at an early-stage startup, built an integrated drone operations ecosystem: a real-time web platform and a cross-platform Ground Control Station app **that syncs** through the cloud.*

Real-time Fleet Management SaaS Platform (Drone/Robotics domain) | *Next.js · React · TypeScript · SignalR · Cesium · LiveKit · TailwindCSS*

- Owned the frontend architecture end-to-end: Next.js App Router structure, infrastructure setup, and multi-environment deployment via Docker and cloud pipelines.
- Built a real-time telemetry pipeline over SignalR (WebSocket) driving live tracking maps, processing **10+ telemetry packets per second** per fleet asset with **sub-100ms latency**, utilizing adaptive buffering to ensure smooth rendering.
- Developed **interactive 2D/3D map visualization** (Cesium, deck.gl, MapLibre GL) for live fleet tracking and route/mission visualization — the same geospatial UI pattern used in logistics and

delivery-tracking apps.

- Integrated LiveKit (WebRTC) to deliver low-latency (**under 200ms**) live HD video streaming from drone feeds to operator dashboards.
- Implemented multi-tenant role-based access control (RBAC) and subscription-based feature gating, including frontend integration of **PayPal Subscription payments** (checkout flow, plan management, and webhook-driven status updates) across multiple user roles.
- Architected reusable UI infrastructure — custom React hooks, centralized state management, TanStack Table/Query, React Hook Form + Zod — standardizing 15+ modules, **reducing feature development time by 30%** for upcoming iterations.
- Contributed to the **ASP.NET Core (.NET/C#)** and **Python** backend, implementing PayPal Subscription payment logic with RSA-SHA256 signature verification and idempotency handling.

Ground Control Station (GCS) - Cross-platform Drone Operations App | Flutter · Dart · MAVLink · WebSocket / MQTT

- Self-taught Flutter to build a companion cross-platform Ground Control Station app (desktop & mobile) with MAVLink telemetry and live video streaming, synced in real time with the company's cloud platform to form a single connected ground-to-cloud ecosystem.

Freelance Web & Mobile Developer

Jun 2024 – Oct 2025

- Worked alongside a **senior developer** on real client projects — taking ownership of assigned features end-to-end, going through **code reviews**, and adopting production-grade Git workflows and best practices.
- Designed and implemented production-grade backend logic (REST APIs, authentication) using **Python (FastAPI)** and **Node.js** for client projects requiring robust server-side data persistence.
- Successfully delivered and maintained **4 production end-to-end client websites**, driving the entire process from feature discussion to live deployment on **VPS** and **Vercel**.
- Developed a **React Native point-of-sale (POS) app** for a client, handling sales orders and inventory management.

EDUCATION

B.Sc. in Computer Science - Ton Duc Thang University

Sep 2021 – Oct 2025

LANGUAGES

- Vietnamese: Native
- English: Intermediate - Aptis ESOL B2 Certified
- Comfortable reading technical documentation (datasheets, API docs, specs)

ADDITIONAL INFORMATION

- **AI-Driven Efficiency & Continuous Learning:** Proactively master and integrate advanced AI tools (Claude, GPT models) into daily workflows to optimize code quality, automate repetitive architectural setups, and accelerate time-to-market.
- **Problem-Solving Mindset:** Strong mindset for overcoming technical bottlenecks under high-pressure environments; actively contributed to tech innovation events, driving product pitches and prototype architecture.
